ABSTRACT

A plug connector for use ~~in a standard transfer~~ with jacks of different standards has an insulating housing, a plurality of terminals and ~~an transferring element~~ adapter sleeve. The insulating housing has a plurality of terminal grooves formed in a front end thereof. The terminals are respectively arranged in the terminal grooves. The ~~transferring element~~ adapter sleeve is coupled on the insulating housing, and the ~~transferring element~~ adapter sleeve is moveably adjusted at a predetermined position ~~due to the standard transfer~~ adapt the plug to one of two standards. Furthermore, ~~the insulating housing with uniform size can be transferred to two standards, so that the manufacturing cost thereof can be effectively reduced, and it is extremely simple and easy to obtain the standard transfer.~~
